

## Simple procedure to upgrade your controller

1. Download the firmware to your system and unzip the file.
2. Make sure you Turn off the Gamepad.
3. Press and hold the left joystick inside and push it upward to put the gamepad in firmware update mode.
4. Open the downloaded firmware in your system and connect your controller to the system with the Type-C to USB cable included with the controller while holding the joystick as per the above step.
5. Click on the Update button and then click on Yes. Hold the Joystick in the same position until the upgrade is completed.
6. Your controller has been updated successfully, and the job is well done. You can reset the gamepad if you face any issues with the gamepad after the update.

(Note: The update button in the firmware file will not be activated if you do not press the left Joystick and push it upwards)
